SB-NinjaZX1100 Installation

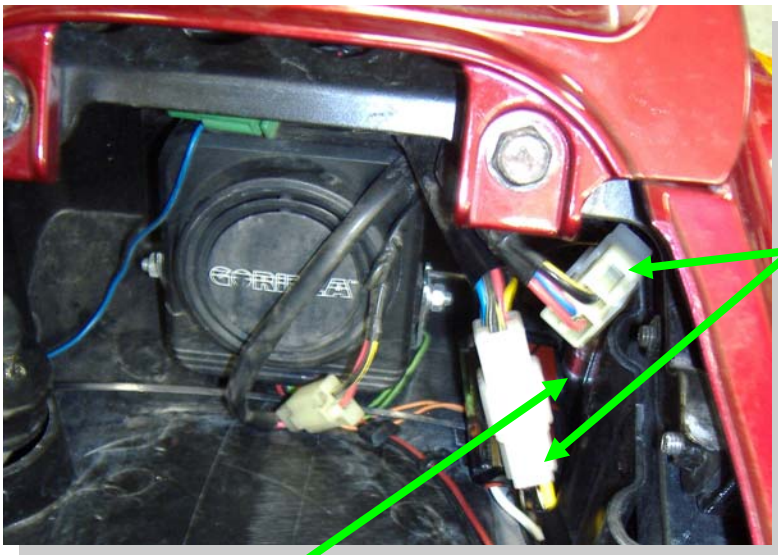

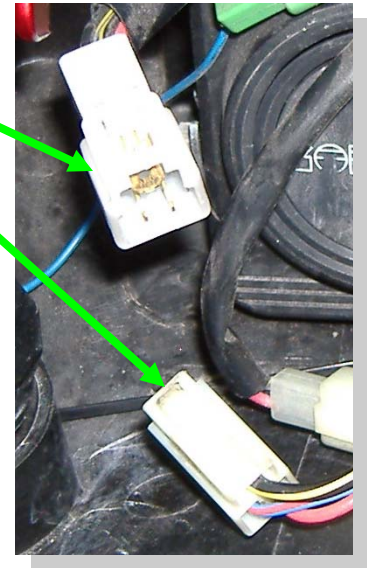

Before starting the installation please verify the operation of the brake lights.

STEP 1:

Remove the seat to expose the 3-conductor connectors of the brake light.

Disconnect (open) this 3-conductor connector as shown.

STEP 2:

Plug the SB-NinjaZX1100 unit in series between the above connector. (The connectors are keyed such that installation can only be performed one way.)

STEP 3:

Tuck and secure the SB-NinjaZX1100 unit and connectors with supplied tie-wraps and double-sided tape as shown. (See Datasheet for more installation help). Test for functionality. Ride it, and tell all your friends about us!
