

SB-Monster Installation

Before beginning the installation verify the operation of the brake light.

STEP 1:

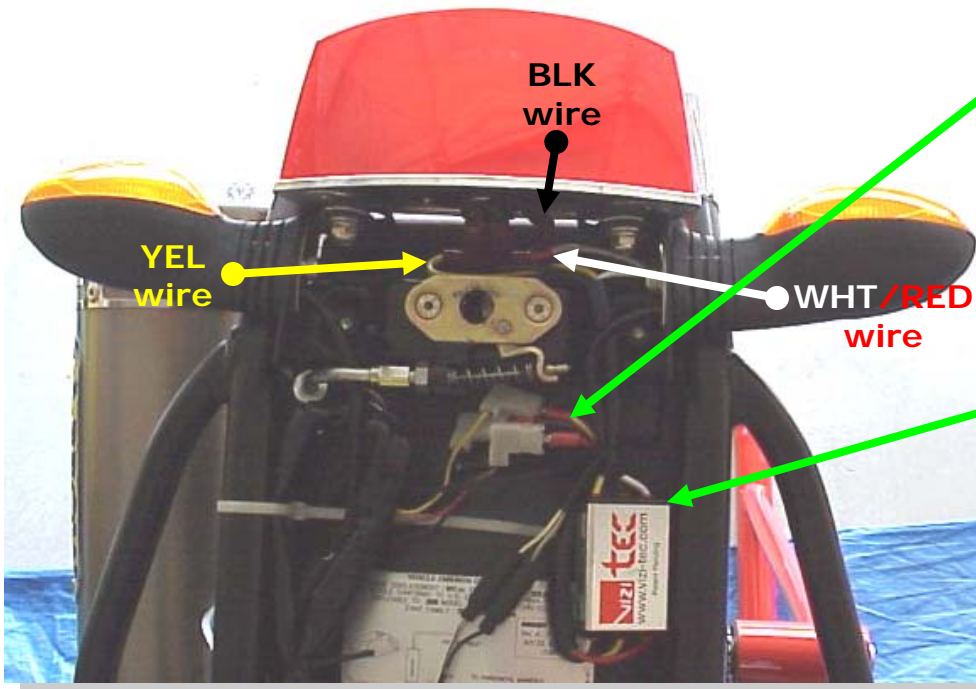

Per the owner's manual, unlock and remove the seat assembly to expose the rear lamp housing module.

Unhook the stock harness by disconnecting the 3 flag(90 deg.) quick disconnects from the lamp housing module.

STEP 2:

Install the SB-Monster in series between the stock harness and the lamp housing by matching the lamp housing's colored tabs with the SB-Monster's wiring. See Data-sheet for more info.

STEP 3:

Secure the SB-Monster with supplied tie-wraps and double-sided tape(*optional*). Test for functionality and reinstall seat. Done!
